

# Project Overview: GUI Billing

How to run:

2023273-AP-A4\src\main\java\com\example\guibilling\HelloController

Run this

- I have implemented screens for GUI that run simultaneously with CLI changes made in CLI are reflected in GUI navigation buttons are there which are used to select options henceforth it runs with CLI
- This is done using stage hide and stage show this
- file handling is all implemented even though we can directly access the data
